

## Derma Fillers

### Derma Fillers

Derma Fillers are injections of gel into the skin that can lift and erase lines and wrinkles. They can be used to contour the face and also to create volume where it is needed most.

They have changed enormously over the last decade and can be tailored to your specific needs, from the finest fillers for dehydrated skin/the smallest of lines, to more lifting and reshaping treatments.

Flawless Aesthetic Clinic only uses “Premium” fillers. These include Restylane, Sculptra and Radiesse, bio-degradable, non-permanent fillers. Most are made of Hyaluronic Acid, a natural component of your skin, which also helps to rejuvenate collagen and elastin and create a more youthful appearance.

Fillers are a minimally invasive procedure that can achieve a soft and natural look. They can be used in the lips to restore shape and definition, give volume to the face, erase wrinkles, shape contours, treat hands and neck and give skin a more hydrated dewy appearance.

I also offer advanced treatments using Derma fillers – Non-Surgical Rhinoplasty. This highly skilled procedure involves injecting derma filler to precise areas on the nose which can in turn vastly improve the look by appearing to slim, reduce the appearance of bumps and even lift a hooked nose.

8 Point Face Lift. This uses advanced derma fillers to smooth and re-contour your skin, enhance your natural features and restore volume throughout your face.

#### How will I look immediately after the treatment?

Results are instant. There is often a little swelling and pinkness to the skin. This usually settles down after a few hours, but may last until the next day (particularly for lip treatments). Bruising can always occur with any type of injection, but I do take steps to minimise this.

#### How is the treatment performed?

An anaesthetic cream is applied to the skin, then tiny amounts of derma filler are injected using a very fine needle. This gently lifts the wrinkle or fold to the required level. After the treatment cool packs and a soothing cream are used.

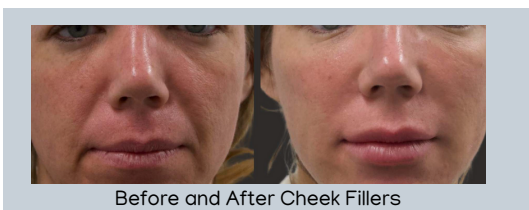

#### How long do derma fillers last?

This varies from client to client and depends on the area being treated and the amount of filler used. However, treatments generally last from four months to a year.

#### Is it painful?

As well as the anaesthetic cream applied before treatment. Today’s modern fillers have a local anaesthetic within the gel. The needle used is very fine and most people find the treatment only mildly uncomfortable.
